HIV in Prisons, 2003

By Laura M. Maruschak
BJS Statistician

On December 31, 2003, 2.0% of State prison inmates and 1.1% of Federal prison inmates were known to be infected with the human immunodeficiency virus (HIV). Correctional authorities reported that 22,028 State inmates and 1,631 Federal inmates were HIV positive. The number known to be HIV positive totaled 23,659, down from 23,864 at yearend 2002.

Of those known to be HIV positive in all U.S. prisons at yearend 2003, an estimated 5,944 were confirmed AIDS cases, up from 5,643 in 2002. Among State inmates, 0.5% had AIDS; among Federal inmates, 0.4%.

During 2003, 268 State prisoners died from AIDS-related causes, down from 283 in 2002. In 2003, 8% of State inmate deaths were attributed to AIDS, down from 32% in 1995. Among Federal prisoners 14 died from AIDS-related causes, down 3 deaths from the total in 2002.

This report is based on the 2003 National Prisoners Statistics (NPS-1) and the Deaths in Custody Reporting Program (DCRP). Data from NPS-1 are reported on one form by the departments of corrections in 50 States and by the Federal Bureau of Prisons. DCRP data are from individual records for each death. A record includes information on the deceased's characteristics such as gender, age, and race/Hispanic origin.

Highlights

Number of HIV-infected inmates steadily decreasing since 1999

Yearend	HIV-positive prison inmates		Jurisdiction	HIV-positive prison inmates	
	Number	Percent of custody population		Number	Percent of custody population
1998	25,680	2.2%	New York	5,000	7.6%
1999	25,807	2.1	Florida	3,112	3.9
2000	25,333	2.0	Texas	2,460	1.8
2001	24,147	1.9	Federal system	1,631	1.1
2002	23,864	1.9	California	1,196	0.7
2003	23,659	1.9	Georgia	1,095	2.3

- Between 2002 and 2003 the number of HIV-positive prisoners decreased less than 1%, while the overall prison population grew 1.6% during the same period.
- At yearend 2003, 2.8% of all female State prison inmates were HIV positive, compared to 1.9% of males.
- During 2003, 29 States reported a decrease in the number of HIV-positive prisoners, and 14 States and the Federal system reported an increase.
- New York held about a fifth of all inmates (5,000 inmates) known to be HIV positive at yearend 2003.
- Florida, with an increase of 264 HIV-positive inmates, reported the largest increase, followed by the Federal system (up 84). New Jersey, with 99 fewer HIV-positive inmates, reported the largest drop.
- The overall rate of confirmed AIDS among the prison population (0.51%) was more than 3 times the rate in the U.S. general population (0.15%).

Rate of AIDS-related deaths in State prisons decreased in 2003

Year	AIDS-related deaths in State prisons		Rate per 100,000 inmates
	Reported in NPS-1	Total*	
1995	1,010	--	100
1996	907	--	90
1997	538	--	48
1998	350	--	30
1999	242	--	20
2000	185	--	15
2001	256	311	25
2002	215	283	22
2003	213	268	21

*Total deaths for 2001-03 are based on a combination of NPS-1 and DCRP data.

- In 2003, 282 prisoners died from AIDS-related causes — 268 State inmates and 14 Federal inmates.
- The number of AIDS-related deaths in State prisons decreased 73% from 1995 to 2003.
- Through a combination of death data from both National Prisoner Statistics and the Deaths in Custody Reporting Program, 55 additional AIDS-related deaths were identified for 2003.

HIV-positive inmates comprised 2.0% of the State prison population in 2003, unchanged since 2001. In Federal prisons HIV-positive inmates comprised 1.1% in 2003. Overall, the percentage of the total prison population with HIV has remained constant at 1.9% since 2001.

Year	Percent of custody population known to be HIV positive	
	State	Federal
1998	2.3%	1.0%
1999	2.3	0.9
2000	2.2	1.0
2001	2.0	1.2
2002	2.0	1.1
2003	2.0	1.1

Inmates in the Northeast had the highest rate of HIV infection

In the Northeast 4.5% of the prison population were known to be HIV positive in 2003, followed by 2.2% in the South, 1.0% in the Midwest, and 0.7% in the West. New York had the highest percentage of inmates known to be HIV positive (7.6%), followed by Maryland (4.2%) and Florida (3.9%).

Vermont, North Dakota, Montana, and Wyoming reported fewer than 10 HIV-positive inmates in their prisons. In 2003 every reporting jurisdiction held at least one HIV-positive inmate. Seven States reported that fewer than 0.5% of their inmate population were HIV positive.

Between 2002 and 2003, 29 States reported a decrease in the number of HIV-positive inmates. The largest decrease was reported in New Jersey (down 99), followed by Connecticut (94), and Texas (68). Fourteen States and the Federal system reported an increase. The largest increases were reported in Florida (up 264), the Federal system (84), North Carolina (38), and Rhode Island (34).

A greater percentage of females than males with HIV infection

On December 31, 2003, 19,777 male inmates and 2,115 female inmates in State prisons were known to be HIV positive (table 2). Overall, 1.9% of male inmates and 2.8% of all female inmates were known to be HIV positive. New York reported the largest numbers of male and female HIV-positive inmates (4,570 and 430, respectively). The second largest numbers of HIV-positive male and female inmates were in Florida (2,744 and 368, respectively), followed by Texas (2,205 and 255, respectively). Four States (Vermont, Minnesota, North Dakota, and Montana) reported having no HIV-positive female inmates. Every reporting State had at least one HIV-positive male inmate.

Over 10% of all female inmates were known to be HIV positive in two States — New York (14.6%), and Maryland (11.1%). New York (with 7.3%) was the only State with more than 5% of male inmates known to be HIV positive.

Table 2. Inmates in custody of State or Federal prison authorities known to be positive for the human immunodeficiency virus, by gender, yearend 2003

Jurisdiction	Male HIV cases		Female HIV cases	
	Number	Percent of population	Number	Percent of population

--Not reported.

^aIncludes estimates of the number of inmates with HIV/AIDS by gender for Alaska, Kentucky, Oregon, and Wisconsin. Estimates were based on the most recent data available by gender.

^bThe number of male and female HIV cases in California was estimated by applying the 2002 gender distribution to the 2003 estimated total known to be HIV positive.

Year	Number of confirmed AIDS cases		
	Estimated ^a	Reported ^b	Comparable ^c
1998	6,809	6,282	5,864
1999	7,039	6,642	5,788
2000	6,295	5,696	5,093
2001	6,286	5,754	5,214
2002	5,643	4,898	4,571
2003	5,944	5,227	4,956

^aIn States not reporting confirmed AIDS, estimates were made by applying the percent breakdown by type of HIV infection from the most recent year when data were provided.

^bExcludes 7 States in 1998, 5 in 1999, 8 in 2000, 6 in 2001, 12 in 2002, and 13 in 2003.

^cThe Federal system and 33 States reported data in all 6 years.

Confirmed AIDS cases made up 0.5% of inmates in State prisons and 0.4% of those in Federal prisons. Of those known to be HIV-positive inmates, more than a fifth had confirmed AIDS.

The States with the largest number of confirmed AIDS cases were New York (800), Texas (778), and Florida (711). Combined, these States held nearly half of all confirmed AIDS cases in State prisons. The Federal system held 626 inmates with confirmed AIDS. Eleven States reported having fewer than 10 confirmed AIDS cases in their prisons; 5 reported having none.

Rhode Island (1.5%) had the highest percentage of confirmed AIDS, followed by Connecticut and New York (both 1.2%). In 12 States confirmed AIDS cases comprised 0.1% or less of State inmates.

During 2003, 16 States reported a decrease in the number of confirmed AIDS cases. Illinois, with a decrease of 73, had the largest drop in the number of confirmed AIDS cases, followed by New York and Connecticut (both down 60). Seventeen States and the Federal system reported an increase in the number of confirmed AIDS cases, led by Texas (up 219) and Florida (191).

Rate of confirmed AIDS 3 times higher among prison inmates than in the U.S. general population

In every year since 1991, the rate of confirmed AIDS has been higher among prison inmates than in the general population (figure 1). At yearend 2003 the rate of confirmed AIDS in State and Federal prisons was more than 3 times higher than in the total U.S. population. About 51 in every 10,000 prison inmates had confirmed AIDS, compared to 15 in 10,000 persons in the U.S. general population.

Year	Percent of population with confirmed AIDS	
	U.S. general population	State and Federal prisoners
1998	0.11%	0.53%
1999	0.12	0.60
2000	0.13	0.53
2001	0.14	0.52
2002	0.14	0.48
2003	0.15	0.51

Note: The percent of the general population with confirmed AIDS in each year may be over-estimated due to delays in death reports. See *Methodology* for source of data.

AIDS-related deaths in State prisons dropped from 1995 to 2003

The number of State inmates who died of *Pneumocystis carinii* pneumonia, Kaposi's sarcoma, or other AIDS-related diseases peaked in 1995 and steadily decreased until 2001 (figure 2). According to data reported in the NPS-1, the number of AIDS-related deaths (213) was slightly less than that in 2002 (215). Overall, after 1995 the number

Rate of confirmed AIDS cases, comparing the general population to State and Federal prisoners, 1991-2003

Note: The shaded area covers the period prior to the 1993 expansion of the classification system for HIV infection and the case definition for AIDS. This expansion improved estimates of the number and the characteristics of persons with HIV disease, but complicated interpretation of AIDS trends. The increase in reported AIDS cases in 1993 was largely the consequence of the added surveillance criteria. See *Morbidity and Mortality Weekly Report*, Centers for Disease Control and Prevention, Vol. 43, No. 45, November 18, 1994.

Figure 1

Rate of State prison inmate death, by cause, 1991-2003

Figure 2

Table 4. Inmate deaths in State prisons, by cause, 1995 and 2003

Cause of death	Deaths of State inmates			
	Number		Rate per 100,000 inmates*	
	2003	1995	2003	1995
Total	3,230	3,133	250	311
Natural causes other than AIDS	2,417	1,569	187	156
AIDS	213	1,010	16	100
Suicide	195	160	15	16
Accident	28	48	2	5

Table 5. Inmate deaths in Federal prisons, by cause, 2002 and 2003

Cause of death	Deaths of Federal inmates			
	Number		Rate per 100,000 inmates*	
	2003	2002	2003	2002
Total	347	335	204	207
Natural causes other than AIDS	315	289	185	179
AIDS	14	17	8	11
Suicide	6	17	4	11
Accident	4	5	2	3
Execution	1	0	1	0
By another person	5	3	3	2
Other/unspecified	2	4	1	2

*Detail may not add to total due to rounding.

of AIDS-related deaths was down 797 from 1,010 in 1995 to 213 in 2003 (table 4).

Among Federal inmates 14 died from AIDS-related causes, down from 17 in 2002 (table 5). In 2003 for every 100,000 inmates, 8 died from AIDS-related causes. These AIDS-related deaths accounted for 4% of all deaths in Federal prison.

The introduction of protease inhibitors and combination antiretroviral therapies produced a substantial improvement in the effectiveness of HIV/AIDS care. See Hammett and Harmon, "Medical Treatment and a Continuum of Care" in *1996-1997 Update: HIV/AIDS, STDs and TB in Correctional Facilities* (July 1999, NCJ 176344).

DCRP identifies more States with AIDS-related deaths in State prisons

Pursuant to the Death in Custody Reporting Act of 2000, BJS began in 2001 to collect individual-level information about deaths in State prisons (DCRP). Overall, 12 States under-reported AIDS-related deaths in the NPS-1 collection, while 11 States under-reported AIDS-related deaths in DCRP.

For a total of AIDS-related deaths in prisons, DCRP and NPS-1 data were combined (table 6). The most complete data for each State's number of deaths were used to calculate the totals for 2001, 2002, and 2003. An additional 55 AIDS-related deaths were identified in 2003, 68 in 2002, and 55 in 2001. Adjusted for under-reporting, the

number of AIDS-related deaths in 2003 was 21 per 100,000 State prison inmates, down from 22 in 2002.

Year	AIDS-related deaths in State prisons		
	Number		Rate per 100,000 inmates
	Reported in NPS-1	Total*	
1995	1,010	--	100
1996	907	--	90
1997	538	--	48
1998	350	--	30
1999	242	--	20
2000	185	--	15
2001	256	311	25
2002	215	283	22
2003	213	268	21

*Total number of deaths for 2001-2003 are based on a combination of NPS-1 and DCRP data.

For the general population the percentage of deaths due to AIDS increased in 2001 but declined in 2002. In 2002 the percentage of deaths due to AIDS was more than 2 times higher in the prison population than in the U.S. general population ages 15-54. About 1 in every 11 prisoner deaths were attributable to AIDS-related causes compared to 1 in 23 deaths in the general population.

Yearend	AIDS-related deaths as a percent of all deaths	
	State prisoners ^a	U.S. general population age 15-54 ^b
1995	34.2%	13.1%
1996	30.8	10.1
1997	18.9	5.8
1998	13.3	5.4
1999	11.2	4.3
2000	8.4	3.9
2001	10.3	4.5
2002	9.1	4.4
2003	8.0	--

-- Not available.

^aPercents are based on the number of inmate deaths, excluding those in jurisdictions not reporting AIDS-related deaths.

^bSee *Methodology* for source of data.

About 1 in 12 deaths in State prisons due to AIDS-related illnesses

In 2003 for every 100,000 State inmates, 21 died from AIDS-related causes. The most AIDS deaths were reported in the South (157), followed by the Northeast (63). Together, these two regions accounted for more than 8 out of 10 AIDS-related deaths in State prisons.

Florida reported the largest number of AIDS-related deaths (42), followed by New York and Texas (27). Eighteen States reported having no AIDS-related deaths.

Relative to the number of inmates, Delaware had the highest rate of AIDS-related deaths (87 per 100,000 inmates), followed by Maryland (54 per 100,000), Florida (52 per 100,000), and Vermont (50 per 100,000).

AIDS-related deaths reported in DCRP show variations by gender, race/Hispanic origin, and age

Of the 210 reported inmate deaths due to AIDS-related causes in 2003, 202 were deaths of males, and 8 were deaths of females (table 7). Inmates between ages 35 and 44 accounted for almost half of all AIDS-related deaths (97). AIDS-related deaths among black inmates (146) accounted for more than two-thirds of all AIDS-related deaths.

Relative to the total number of inmates under State jurisdiction at midyear 2003, males (18 deaths per 100,000) were nearly twice as likely as females

The Bureau of Justice Statistics is the statistical agency of the U.S. Department of Justice. Lawrence A. Greenfeld is director.

September 2005, NCJ 210344

yearend as listed in the *HIV/AIDS Surveillance Report*.

The rate of confirmed AIDS cases in the U.S. resident population was calculated by dividing the annual totals for individuals with AIDS by the population estimates for the U.S. resident population of individuals 13 or older prior to 2000 and 15 or older for 2000 and beyond.

This report and others from the Bureau of Justice Statistics are available through the Internet:

AIDS-related deaths in the United States

The number of AIDS-related deaths for persons age 15-54 was derived from the CDC, *HIV/AIDS Surveillance Report*, yearend editions. Deaths in the U.S. population for persons age 15-54 were taken from the CDC, *Monthly Vital Statistics Report*, Vol. 42, No. 2(S); Vol. 43, No. 12; Vol. 43, No. 6(S); Vol. 45, No. 3(S); and Vol. 45, No. 11(S); and from CDC, *National Vital Statistics Report*, Vol. 47, No. 9; Vol. 47, No. 25; Vol. 48, No. 11; Vol. 49, No. 8; and Vol. 50, No. 15.

AIDS-related deaths as a percentage of all deaths in the U.S. population were calculated by dividing the national estimate of AIDS deaths of persons age 15-54 by the national mortality estimates of persons age 15-54 in a given year.

BJS Deaths in Custody Reporting Program

To implement the Death in Custody Reporting Act of 2000 (PL 106-297), BJS developed four quarterly data collections of death records: local jails (begun in 2000), State prisons (2001), State juvenile correctional agencies (2002), and State and local law enforcement agencies (2003). Records include data on the deceased's characteristics (such as age, gender, and race/ Hispanic origin), criminal background (such as legal status, offenses, and time in custody), and the death itself (such as cause, time, location, and medical conditions and treatment).
